

VI REUNIÓN DE LA SOCIEDAD ESPAÑOLA DE
TÉCNICAS NEUTRÓNICAS (SETN)

24-27 de Junio de 2012
Segovia

VI Reunión de la Sociedad Española de Técnicas Neutrónicas

24 – 27 Junio 2012, Segovia (Spain)

Organizadores:

Sociedad Española de Técnicas Neutrónicas

Universidad Complutense de Madrid

Centro de Seguridad y Durabilidad Estructural y de Materiales

Instituto de Ciencia de Materiales de Madrid

Edición y Maquetación:

Germán Romeo

ÍNDICE

Programa Científico	6
Conferencias Plenarias	
PL-1 Hermenegildo García <i>Gold nanoparticles at the heart of green chemistry for catalytic oxidations and photocatalysis</i>	8
PL-2 Juan Colmenero <i>Polymers, neutrons and computers: Unraveling structure and dynamics in polymers by combining neutron scattering and molecular dynamics simulations</i>	9
PL-3 Markus Strobl <i>ESS - the European neutron source for the science of the future</i>	10
PL-4 Paul Attfield <i>Exploring electronic materials at the limits of powder neutron diffraction</i>	11
Conferencias Invitadas	
IN-1 Emilio Lorenzo <i>Inelastic neutron scattering studies of the magnetochirality in quantum spin systems</i>	13
IN-2 Gabriel Cuello <i>Neutron scattering at high temperature and levitation techniques</i>	14
IN-3 Marisa Medarde <i>Lead Gold Eutectic: an alternative liquid target material for high power spallation sources</i>	15
IN-4 Ricardo Fernández <i>Análisis del valor relajado de la distancia interplanar, d_0, en la evaluación del estado de tensiones residuales en una soldadura</i>	16
IN-5 Fernando Sordo <i>Design studies for ESS-BILBAO neutronic applications laboratory</i>	17
IN-6 Patricia Lazpita <i>Distribución del momento magnético en aleaciones de Ni—Mn—Ga no estequiométricas</i>	18
IN-7 B. Jorge Rubio Retama <i>Chain Diffusion in Interpenetrated Microgels with UCST</i>	19
IN-8 Mónica Jiménez <i>Lagrange- the new vibrational spectrometer at the ILL</i>	20
IN-9 José Luis Martínez <i>Últimos avances en instrumentación del Instituto Laue-Langevin (ILL)</i>	21

IN-10 Federico Mompeán		
	<i>Polarized Neutron Reflectometry of Complex Oxide Heterostructures</i>	22
IN-11 Fabienne Barroso		
	<i>Neutrons to probe the polymer vibrations under extreme confinement: host and molecular size effects</i>	23
IN-12 Margarita Valero		
	<i>Micelles as Drug Carriers for Controlled Release</i>	24
IN-13 Josep Nogués		
	<i>Magnetic proximity effect in antiferromagnetic/ferrimagnetic core/shell nanoparticles</i>	25
IN-14 Félix Fernández Alonso		
	<i>Neutrones Británicos para la Comunidad Científica Española</i>	26
IN-15 José Luis García Muñoz		
	<i>Spin induced multiferroics: some opportunities and challenges</i>	27
IN-16 Jesús Ángel Blanco		
	<i>Magnetic phase diagram and high-field magnetization measurements in ammonium iron(III) bis (hydrogenphosphate)</i>	28
IN-17 Fernando Palacio		
	<i>Neutron Scattering Studies in Molecular Magnetism</i>	29
IN-18 Esteban Climent		
	<i>Neutron powder diffraction study of BaPb_{1-x}Bi_xO₃</i>	30
IN-19 Javier Sánchez Benitez		
	<i>Preparación a alta presión y caracterización de óxidos metaestables</i>	31
Presentaciones orales		
O-1 Viviana Cristiglio		
	<i>Performances and future improvements of D16 diffractometer at the ILL</i>	33
O-2 Inés Puente		
	<i>The new D1B of the Institute Laue Langevin</i>	34
O-3 Sourav Marik		
	<i>Re-entrant Spin Glass to superconducting phase transformation in Mo_{0.3}Cu_{0.7}Sr₂TmCu_{12.7}O_y</i>	35
O-4 Kunyang Fan		
	<i>Residual strain scanning of alumina-based ceramic composites by neutron diffraction</i>	36
O-5 Imanol de Pedro		
	<i>Magnetic and Neutron Diffraction Studies on Emim[FeCl₄]. A Magnetic Ionic Liquid with Long-Range Magnetic Ordering</i>	37

O-6	Edurne Iturbe <i>Structural relationship and phase diagram for SrLnMRuO₆ perovskites</i>	38
O-7	Jonathan Correa <i>10B4C Multi-Grid Neutron Detector</i>	39
O-8	Irene Calvo Almazán <i>Transition in the diffusive regime of benzene molecules adsorbed on graphite substrates</i>	40
O-9	Muriel Rovira <i>Can differences in molecular arrangement explain the anomalies between low and high density trans-1,2-</i>	41
O-10	Alberto Rodríguez Velamazán <i>Molecular motion in molecule-based magnetic materials: from molecular machines to multiferroics</i>	42
O-11	Ulises Amador <i>Understanding the electrical properties of double perovskites as Solid Oxide Fuel Cells (SOFCs) components using Neutron Powder Diffraction (NPD)</i>	43
O-12	Rubén Martínez <i>Correlación estructura-propiedades en materiales para pilas de combustible de óxido sólido.</i>	44
O-13	Luis Fernández Barquín <i>Investigation of nanoclustered magnetic materials with neutron-based spectroscopies</i>	45
Posters		
P-1	Fernando Aguado <i>Thermal expansion of CaIrO₃ post-perovskite by TOF measurements</i>	47
P-2	Carlos Cabrillo <i>Atrapado de Hidrógeno Molecular en Nanocuernos de Carbón Oxidados</i>	48
P-3	Marta Castellote <i>Neutron diffraction as a tool in the study of reinforced concrete</i>	49
P-4	Pilar Castro <i>Nuevos modelos de ejecución de la activación neutrónica cíclica. Discusión sobre la respuesta teórica y comparación con los resultados</i>	50
P-5	Pilar Castro <i>Dispositivo y software para la realización de activación neutrónica cíclica</i>	51

P-6	Gabriel Cuello <i>The signal of sample environment as a way to measure sample transmission</i>	52
P-7	Gabriel Cuello <i>Structure of deuterated liquid n-butanol by neutron diffraction</i>	53
P-8	Imanol de Pedro <i>Effect of Ni²⁺ (S= 1) substitution on the incommensurate antiferromagnetic structure of Co₂(OH)AsO₄</i>	54
P-9	G. Goracci <i>Role of H-Bonding on the Structure and the Dynamics of Concentrated Polymeric Solutions</i>	55
P-10	J. Hernández-Velasco <i>Magnetic and Cationic Superstructures in SbVO₄ Catalyst Series</i>	56
P-11	Luis Carlos Pardo <i>Microscopic dynamics of glycerol: a QENS study</i>	57
P-12	Luis Carlos Pardo <i>Short range order of CCl₄: a comparison of RMC and MD Methods</i>	58
P-13	Vicente Recarte <i>Influencia del campo magnético en el comportamiento anómalo de la rama transversal de fonones TA₂ en una aleación con memoria de forma de Ni₂MnGa</i>	59
P-14	Daniel Rojas <i>Successive magnetic transitions in TbNiAl₂ studied by neutron diffraction</i>	60
P-15	Regino Sáez <i>Neutron diffraction studies on high pressure RCrO₄-scheelite type oxides (R=rare earth)</i>	61
P-16	Vicente Sánchez-Alarcos <i>Influencia del orden atómico de largo alcance en la transformación martensítica de aleaciones con memoria de forma magnéticas basadas en Ni-Mn</i>	62
P-17	Alejandro Sanz <i>Dinámica confinada en poli(etilén tereftalato) semicristalino: Dispersión Cuasielástica de Neutrones</i>	63
P-18	E. Solana Madruga <i>Neutron diffraction studies on the high pressure Mn₂CrSbO₈ perovskite</i>	64
	Listado de Participantes	65
	Información General	66

Residual strain scanning of alumina-based ceramic composites by neutron diffractionJ. Ruiz-Hervias¹, G. Bruno², S. Bueno³, J. Gurauskis³, C. Baudín³, K. Alumina-based ceramic composites are considered a candidate material for certain structural applications, namely as thermal insulation barriers in motors and turbines and as biomaterials in implants. However, in order to be used for this purpose, their mechanical and fracture properties need to be enhanced. This has been studied for decades and several toughening mechanisms have been proposed. In some cases, the poor fracture behaviour has been attributed to detrimental residual stresses, although definitive experimental support is sometimes lacking. These stresses may arise during cooling from the sintering temperature, due to the differences in the thermal expansion coefficients of the matrix and the reinforcement. Consequently, in order to improve the durability and the structural integrity of ceramic composites, it is necessary to understand the nature and the magnitude of residual stresses generated in the fabrication process.

Two different ceramic systems were investigated: Al₂O₃/Al₂TiO₅ (alumina/aluminium titanate) and Al₂O₃/Y-TZP (alumina/tetragonal ZrO₂ stabilized with 3 mol% Y₂O₃). Monolithic and layered structures were obtained by different processing routes. In addition, the effect of different reinforcement volume fractions was also studied.

Residual stresses were measured by neutron diffraction on the strain imager SALSA [1], at the ILL, Grenoble, France. SALSA features a Stewart Platform as a sample stage, which allows very flexible sample handling capabilities and arbitrary scan trajectories in the 3D space. In our case the wavelength used was 2.06 Å. The (double-focussing) Si-monochromator reflection (311) was used with a take-off angle of 85°. A 2D position sensitive detector with an angular opening of approximately 5° was mounted on SALSA. Primary and secondary slits were used. The gauge volume (which can be varied automatically via step motors) was set to 1×1×10 mm³. Typical counting times with this set-up vary from 1 to 5 min for Al₂O₃.

The objective of this work is to non-destructively determine the residual stress profile in the bulk of two characteristic types of alumina-based composites, with the aim of improving their durability and structural integrity.
